

To the Commission:

Allowing Part 15 Device users to employ high field strengths in Amateur Radio Service and Amateur Satellite Service bands is a one-way ticket to an Enforcement Bureau nightmare. As soon as such devices are employed, those amateur radio operators in that part of the spectrum who are disturbed will undoubtedly complain to the Commission. The consumers will be required to discontinue operating the equipment, and the Part 15 device manufacturer in that band will notice a significant diminishment of their profit margins. For this reason, and in the public interest of avoiding conflicts that are obvious on their face, I recommend and pray the Commission will reconsider its ruling by prohibiting increased field strengths for Part 15 devices in the 24 GHz amateur band. Furthermore, I ask that those who have requested additional time for comment be granted same so that others have time to comment.

Respectfully yours,

/s./ James E. Whedbee
